

New 10-Level Hospital Parking Deck Protected by Stondeck Urethane Technology

A Toronto hospital welcomes visitors with a new, seamless, high performance parking deck by Stonhard.

Products used at Hospital Parking Garage
• Stondeck XD2.

In 2011, more than 88,000 square feet of Stondeck XD2 was installed in the 10 split levels of a hospital in Toronto, Canada. This urethane parking deck system provides a state-of-the-art functional and aesthetic solution for new building projects like this.

Stondeck XD2 is a flexible, solvent-free parking deck coating system which provides a chemical and slip-resistant surface for indoor covered parking decks, underground parking garages and walkways. It cosmetically enhances parking facilities while reducing tire noise and provides a brighter, safer environment for both vehicles and pedestrians.

Stondeck XD2 is suitable for both refurbishment and new construction projects. The parking area is often the first point of call for a visitor to any public, private or commercial building. It is the "front door" of the building, while also serving its primary functional role.

There is no doubt that first impressions count and appearance, ease of use, signage, bright lighting and clear directional markings all help to make a parking garage a positive, safe environment for the visitor while in their vehicle and on foot.

The Stonhard Difference

Stonhard is the unprecedented world leader in manufacturing and installing high-performance polymer floor, wall and lining systems. Stonhard maintains 300 Territory Managers and 175 application crews worldwide who will work with you on design specification, project management, final walk through and service after the sale. Stonhard's single-source warranty covers both products and installation.
